Course Description: Agile Project Management officially began in 2001 and has become a popular project management approach. This course will focus on how to interact with the customer in an agile framework to show value. The Business Analyst must use specific skills to actively involve the customer in delivering features and functionality throughout each iteration of the project. This presentation will explore actions which reinforce the ability to respond to a changing project environment while focusing on delivering high customer value in every project.

Method of teaching: Students will use discussion, cases, and group activities to facilitate the course.

Course Objectives:

Objective 1: Define Agile Project Management and the Agile manifesto

- Compare why traditional projects struggle and fail
- Discuss criteria on when to use the Agile methodology
- Identify the success factors of Agile Project Management
- Identify the principles of Agile Project Management
- Compare predictive planning and adaptive planning

Objective 2: Review how to use daily stand up meetings successfully

- Examine the role of Business Analyst in the Agile Project Environment
- Examine the role and core skills of the project manager in Agile Project Management
- Examine the role of the culture to support the project team in Agile Project Management

- Examine the role of Business Analyst in enterprise
- Examine the role of Business Analyst in the project

Objective 3: Compare goals-based and issue-based analysis

- Examine product ownership analysis

Objective 4: Discuss the strengths and weaknesses in using a combination of roles

- ScrumMaster and Business Analyst
- Team leader and Business Analyst
- Product Owner and Business Analyst
- Team with one member and Business Analyst
